

Statistics for Data Analysis

Lecturer: Cristiani Eccher PhD
ceccher@cct.ie

Credits to Marina Intorno

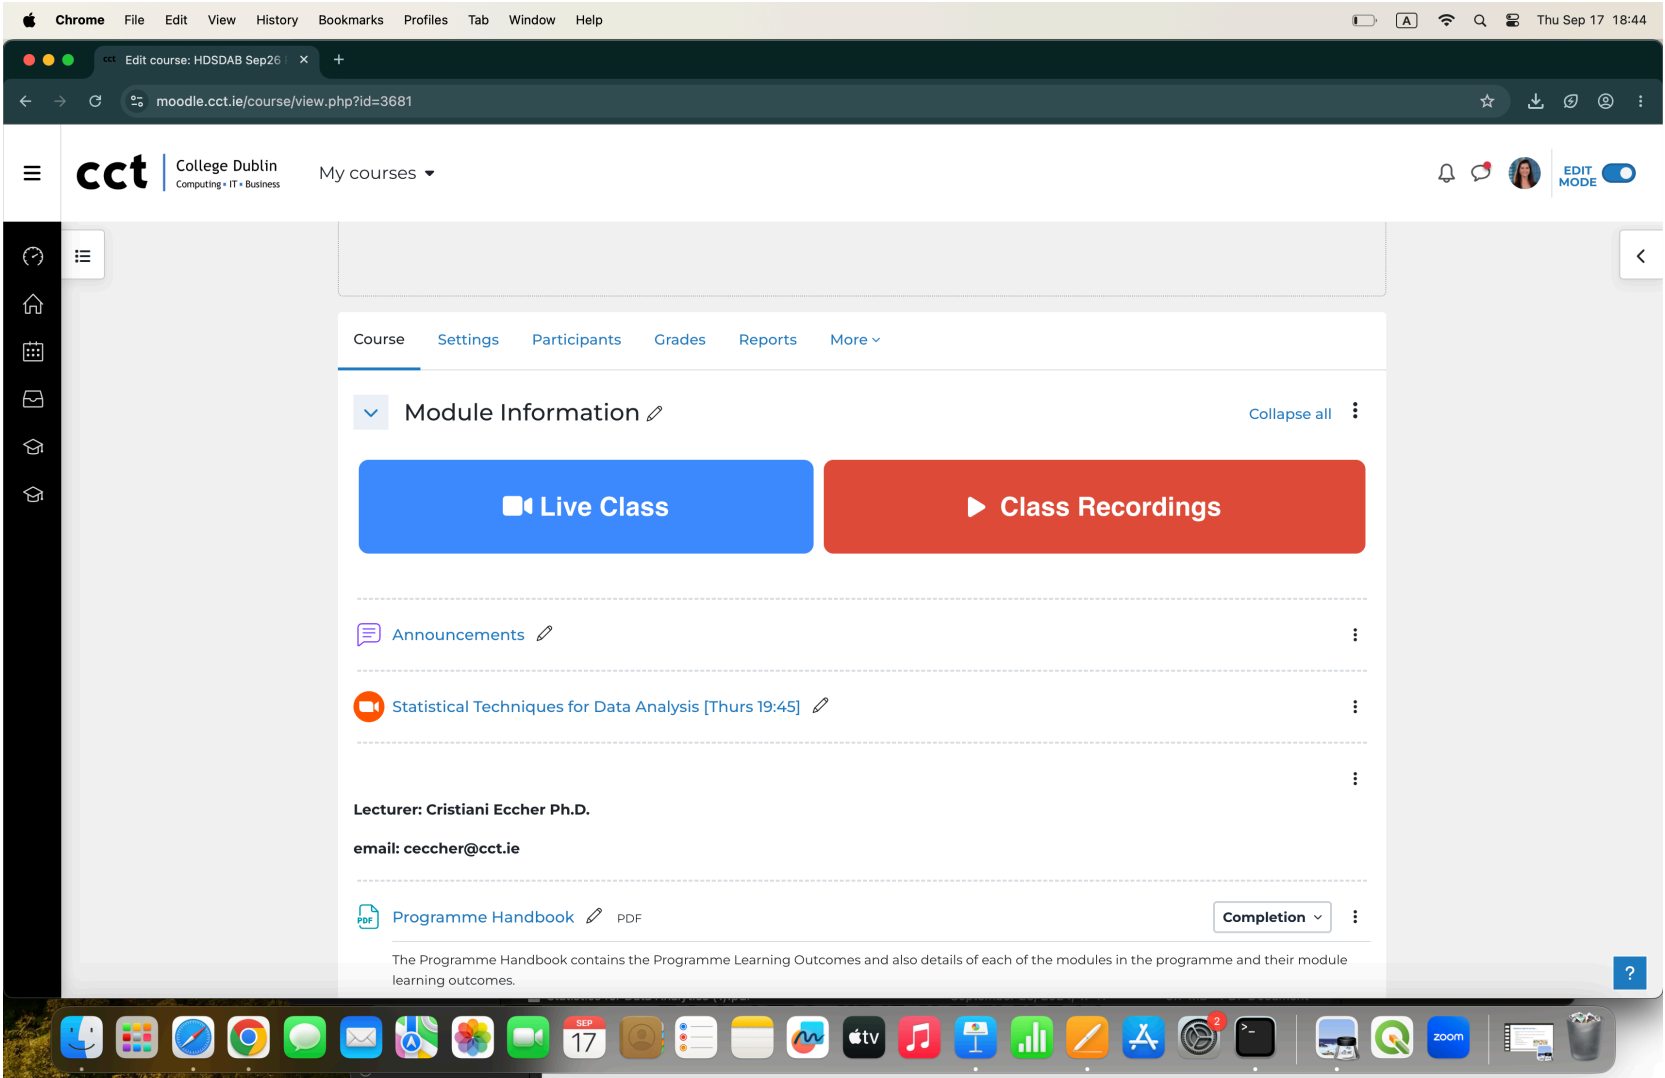

Welcome to Statistics!

Presentation

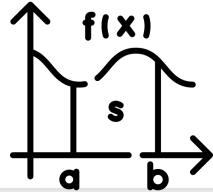

- Who is the Lecturer?
 - Love Dogs, Coffee and Books
 - In Tech area since the first MS Recycle Bin
 - Passion for Data

Module Presentation

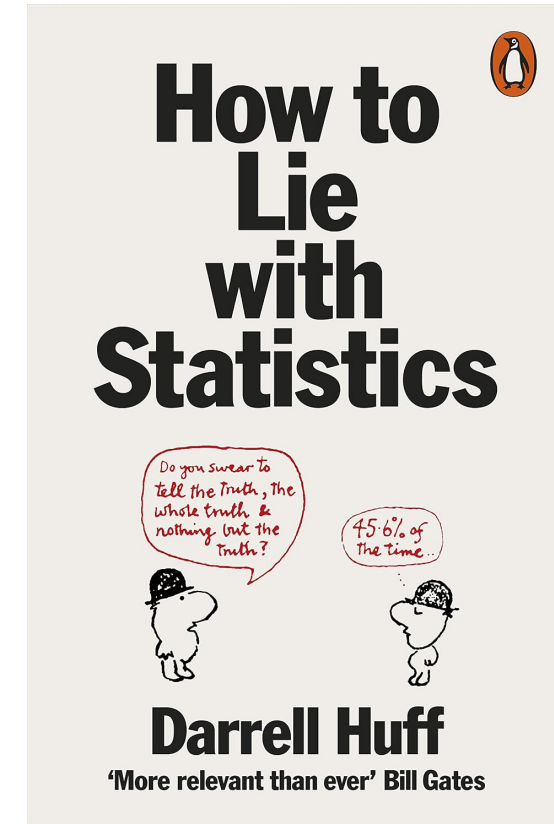

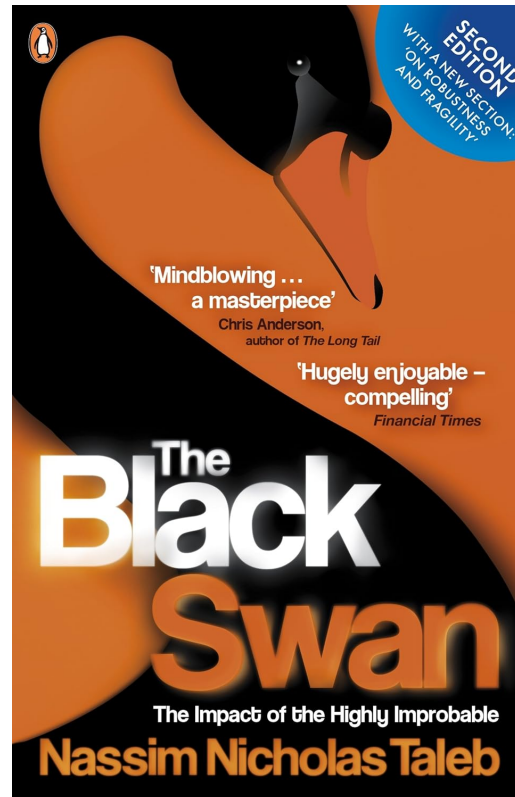

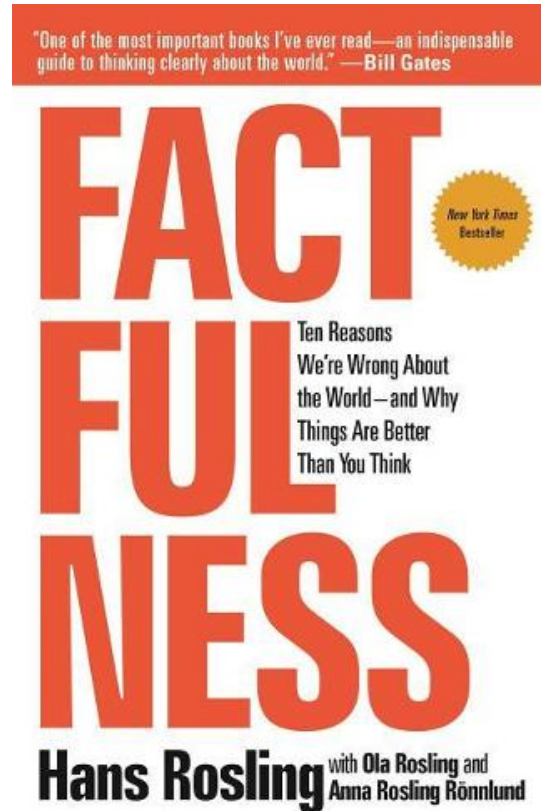

Daily Schedule:

19:45 - 20:45		Let's wake up: Engaging question - Promote Debate Subject Introduction: Maths, theory, application
Break - 20:45 - 21:00		Break
21:00 - 21:45		Exercises: practice, practice and practice Python Game, group activity, exercise, quizzes..

Assessment

CA 1 - 40%	Subjects from weeks 1 to 4 Released: Week 2
CA 2 - 60%	Dataset provided and and requested statistical analysis Recording 10 minutes (max) presenting the main concepts Released: Week 5
Repeat	Grade achieved < 40%

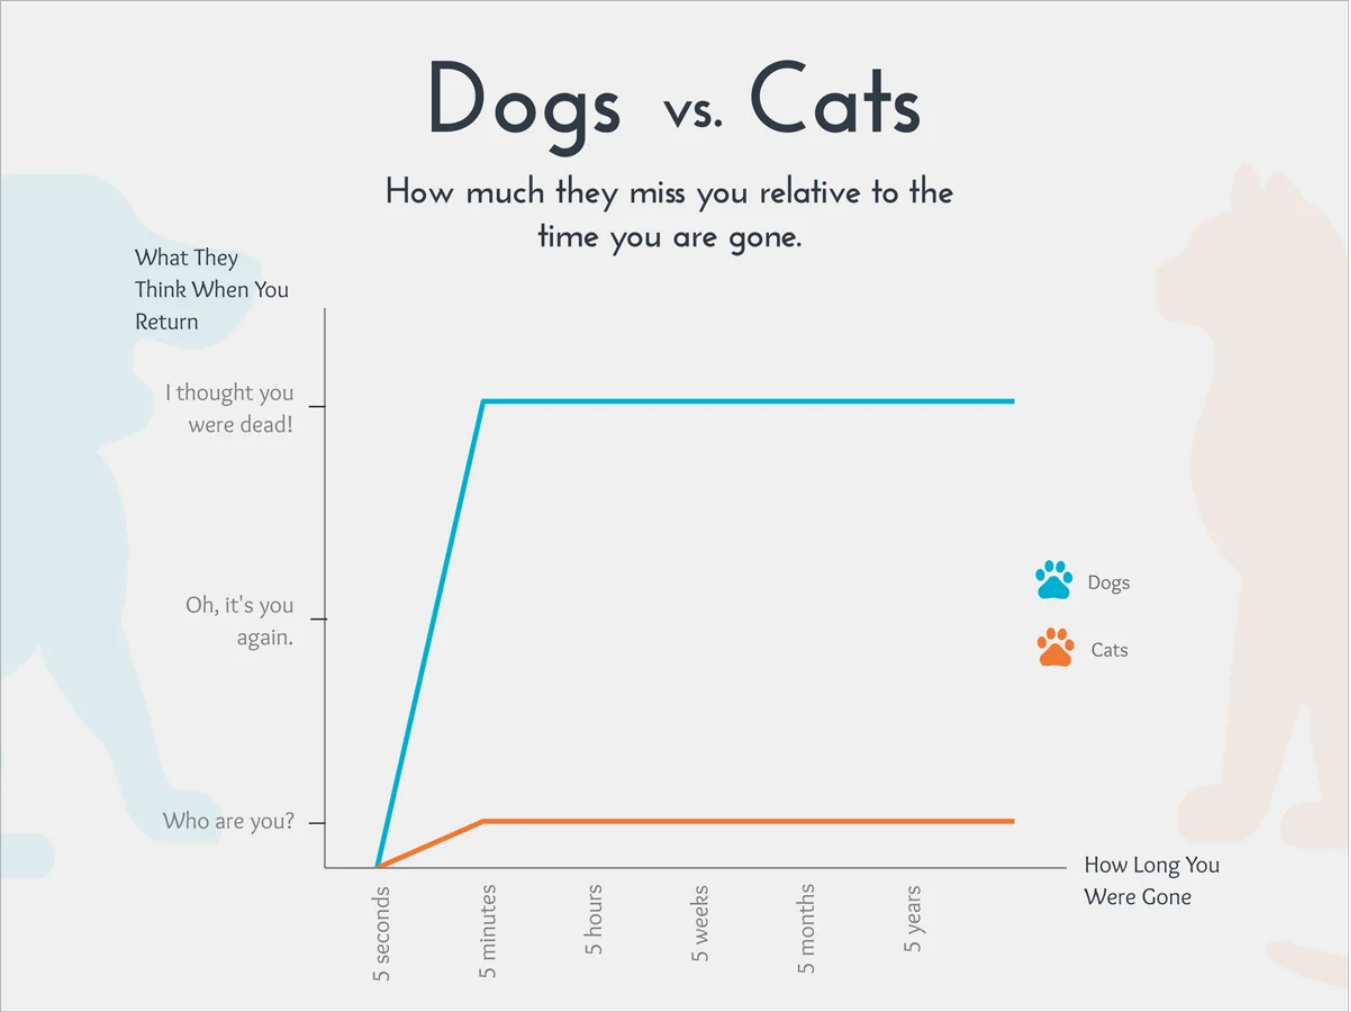

Recommended Books

Let's wake up!!

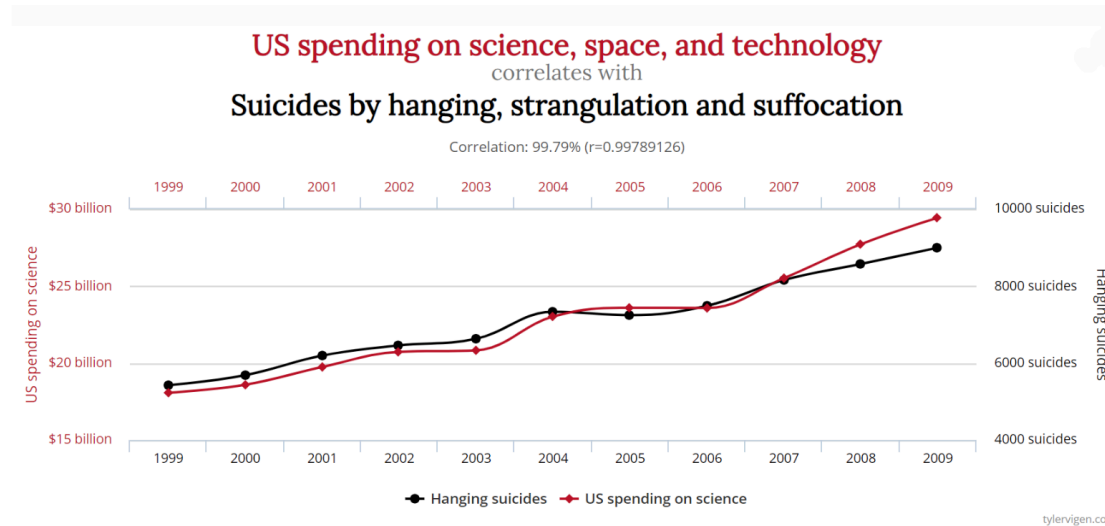

Why Learning Statistics Matters in the Age of AI?

Statistics structures data -> Information

Critical Thinking

Example #3 – “Crime Increased by 200%”

A headline might claim that crime increased by 200%.

But if incidents increased from **1 case to 3 cases**, that is technically a 200% increase.

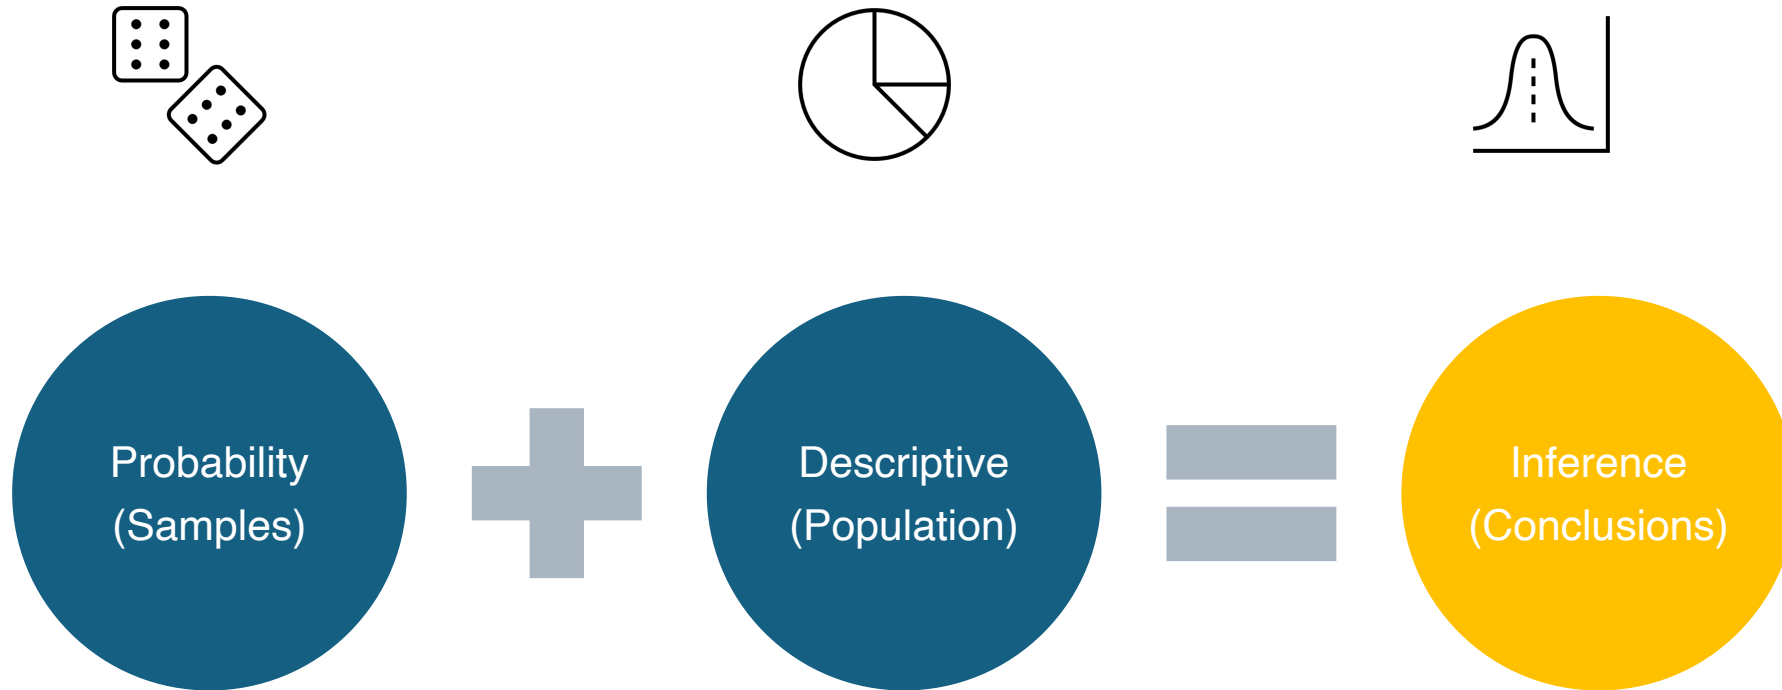

Why it's misleading:

- The percentage sounds dramatic even though the total numbers are small.

Key Concept for this Lecture

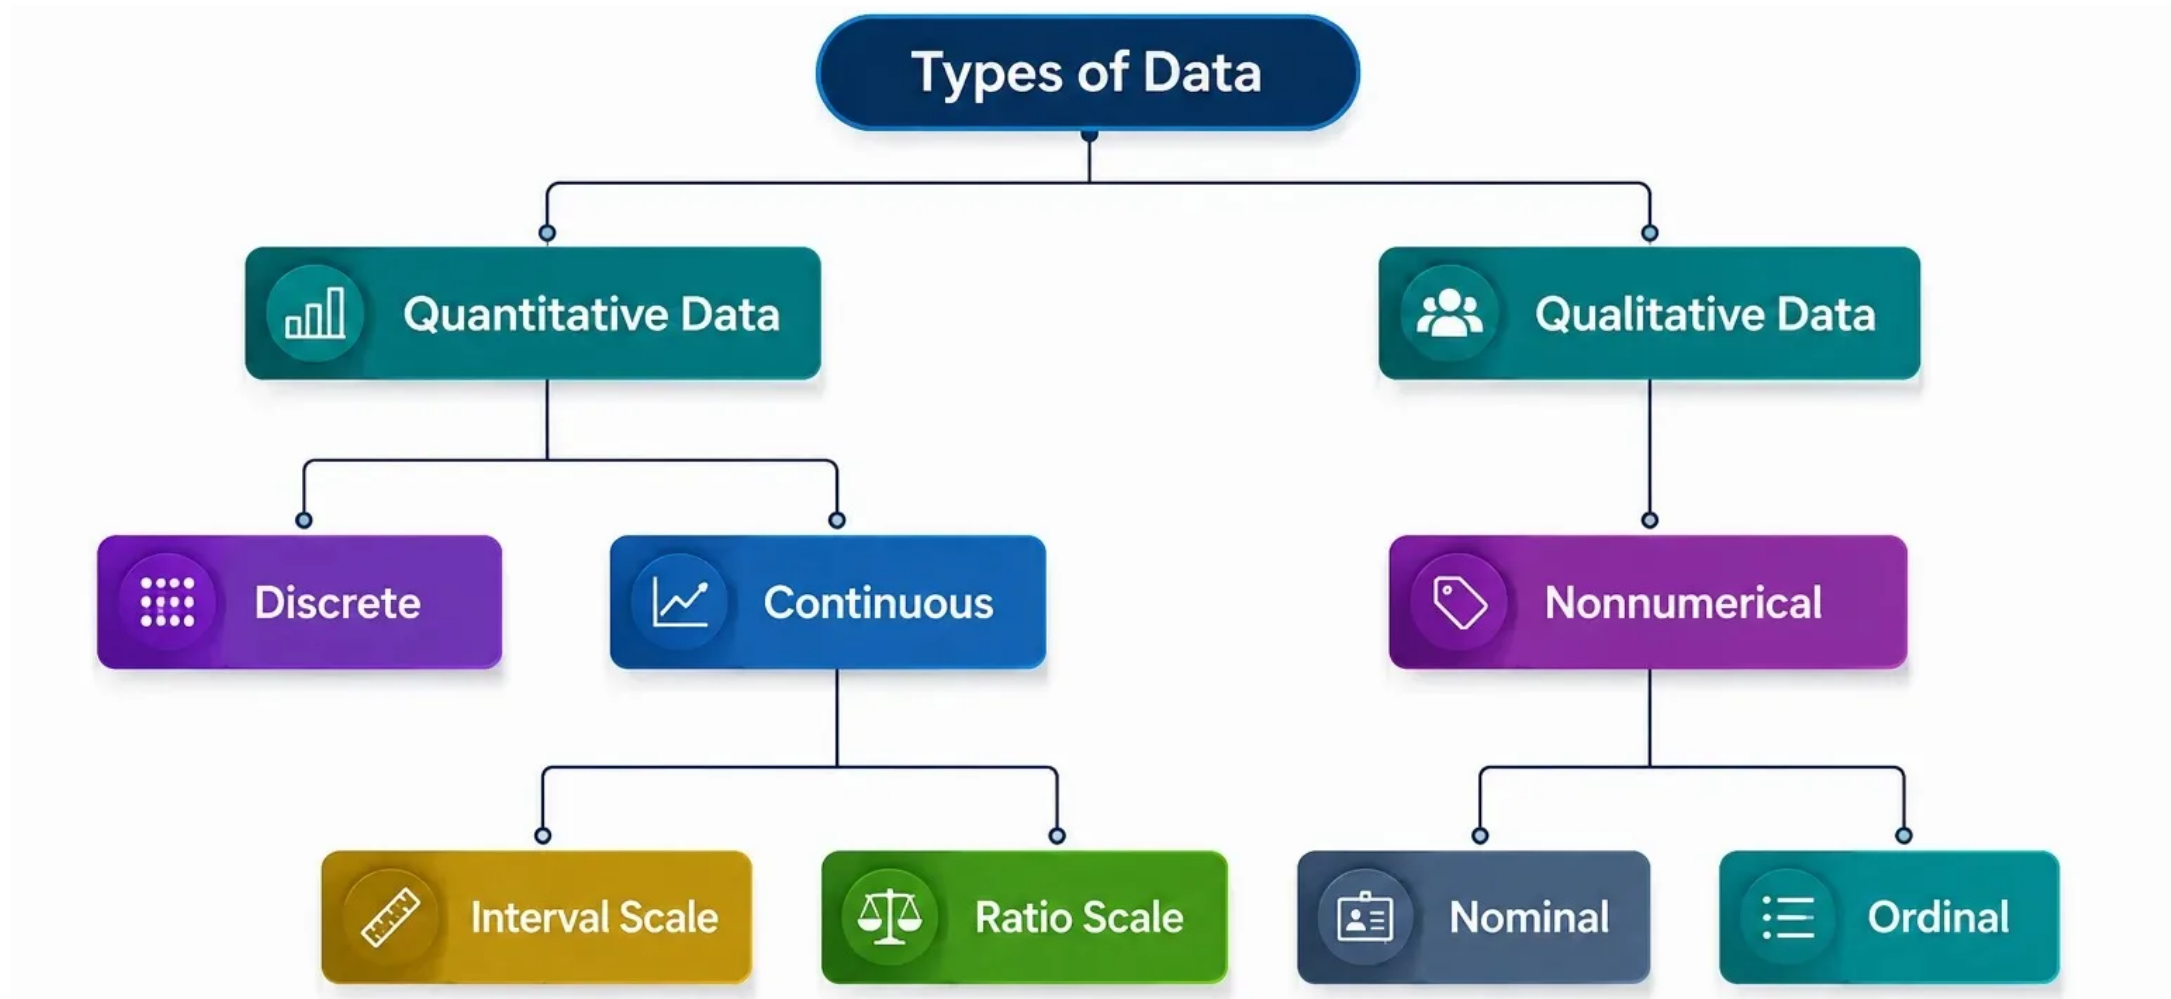

1. Inferential Statistics

2. Phases of Data Analytics

Basics of Data Types:
